He was, of course, referring to the M1 Garand, the primary shoulder arm of U.S. troops during World War II and beyond. In fact, the Garand continued to serve our GIs throughout the Korean War and was reenlisted as a sniper rifle in Vietnam. There are a lot of re-welded receivers out there, but identifying them is often difficult. Since I've done a lot of looking over the years, and seen some few of these, I'll try to summarize my experience.

Name - Question - 1903 Springfield 1903, 1903A3 stock, cross pins, not cross bolts Remington stock FJA in a rectangle inspector mark stock. Just directly ahead of the front receiver bolt is stamped into the stock (6) small stamps about 3/16 in diameter, numbers enclosed by circles and squares. 13 & 14 with circles and 1 & 12 in circles. 2 other are in circles, looks like another 14 and 16. The SKS has a conventional layout, with a wooden stock and rifle grip. It is a gas-operated rifle that has a spring-loaded bolt carrier and a gas piston rod that work to unlock and cycle the action via gas pressure exerting pressure against them. The bolt is locked to contain the pressure of ignition at the moment of firing by tilting downwards at its rear and being held by a lug pressed into ...
